

Blinkit Sales Analysis Report

Executive Summary

This report provides an analysis of Blinkit's sales performance, product categories, outlet characteristics, and customer ratings. The dashboard helps identify key business trends, top-performing products, and outlet performance across different locations and store formats.

Key Performance Indicators (KPIs)

- Total Sales: \$1.20 Million
- Average Sales per Item: \$141
- Total Number of Items Sold: 8,523
- Average Customer Rating: 3.9

These KPIs indicate strong overall business performance with a healthy sales volume and consistent customer satisfaction levels.

Fat Content Analysis

Sales were analyzed based on product fat content categories.

- Regular Fat Products Sales: \$776.32K
- Low Fat Products Sales: \$425.36K

Regular fat products contributed approximately 65% of total sales, indicating a higher customer preference compared to low-fat products.

Fat Content by Outlet Location

Highest Performing Location - Tier 3

- Low Fat Sales: \$0.31M
- Regular Fat Sales: \$0.17M

Tier 3 locations generated the highest sales across both fat categories, demonstrating strong customer demand in these markets.

Lowest Performing Location - Tier 1

- Low Fat Sales: \$0.22M
- Regular Fat Sales: \$0.12M

Tier 1 locations recorded the lowest sales contribution, suggesting opportunities for business improvement and targeted marketing efforts.

Item Type Analysis

Highest Selling Category

- Fruits and Vegetables: \$0.18M

The Fruits and Vegetables category generated the highest revenue, reflecting strong consumer demand for fresh produce.

Lowest Selling Category

- Seafood: \$0.01M

Seafood contributed the lowest sales, indicating relatively lower demand compared to other product categories.

Outlet Establishment Analysis

Highest Sales Year

- 2018: \$205K

Outlets established in 2018 generated the highest sales, indicating strong operational performance.

Lowest Sales Year

- 2011: \$78K

Outlets established in 2011 recorded the lowest sales contribution.

Outlet Size Analysis

- Medium Outlets: \$507.90K
- Small Outlets: \$444.79K
- High Outlets: \$248.99K

Medium-sized outlets generated the highest revenue and appear to be the most efficient store format within the network.

Outlet Location Type Analysis

Highest Sales

- Tier 3: \$472.13K

Lowest Sales

- Tier 1: \$336.40K

Tier 3 locations consistently outperformed other location types, contributing the highest share of overall sales.

Outlet Type Performance

Sales Performance

- Highest Sales: Supermarket Type 1 (\$778.55K)
- Lowest Sales: Supermarket Type 3 (\$130.71K)

Supermarket Type 1 was the best-performing outlet type, contributing more than half of total revenue.

Product Count

- Highest Number of Products: Supermarket Type 1 (5,577)
- Lowest Number of Products: Supermarket Type 2 (928)

Supermarket Type 1 maintained the largest product inventory and sales volume.

Average Sales

- Highest Average Sales: Supermarket Type 2 (\$142)
- Lowest Average Sales: Grocery Store and Supermarket Type 3 (\$140)

Average sales values were relatively consistent across outlet types.

Customer Ratings

- Average Rating: 3.9 across all outlet types

Customer satisfaction remained stable regardless of outlet format.

Item Visibility

- Highest Visibility: Grocery Store (0.10)
- Lowest Visibility: Supermarket Type 1, Type 2, and Type 3 (0.06)

Grocery Stores achieved better product visibility compared to supermarket formats.

Conclusion

The analysis reveals that Tier 3 locations and Supermarket Type 1 outlets are the primary drivers of Blinkit's sales performance. Fruits and Vegetables emerged as the most profitable product category, while Regular Fat products generated significantly higher sales than Low Fat products. Medium-sized outlets delivered the best overall performance, and customer ratings remained consistently positive across all outlet types. These insights can support future inventory planning, outlet expansion strategies, and marketing initiatives.
